# SOMERSET'S

## *Snap*s for Greenhouse Forcing

### ORIGINATORS STRAINS

Modern varieties have really "snapped" this flower back into popularity. There are few flowers that are as profitable for the greenhouse grower. With proper selection of varieties and variation of sowing dates, it is possible to have flowers almost the entire year. There is a good market in June and July, especially for white, that is not now being adequately supplied.

### THE HYBRIDS

Uniform, free flowering, hybrid vigor, all go to making an article that is profitable to grow. Because of the extra vigor, it is best to be careful that you do not overfeed.

**Fringed White Snow Hybrid.** The first white hybrid and really good. A pure, clean white, it flowers early and freely.

**Better Times.** One of the older hybrids. The color of the Better Times rose and the habit of Christmas Cheer.

1/2 Pkt. \$1.25; Pkt. \$2.00

**Christina.** Bright pink shade somewhat deeper than Mary Ellen. It is earlier than Mary Ellen and the flowers are larger and more closely spaced. Seed ready June 15.

**Christmas Cheer.** The popular variety which is now the standard rose pink.

Prices, any of the above hybrid Snapdragons, unless noted: 1/2 Pkt. \$1.75; Pkt. \$3.00.

#### Hints on Germinating Snapdragon Seed

Seeds germinate best at 55°-60°. Usually a packet will sow a standard size flat. Soil should be sterilized either with steam or formaldehyde (see Page 50, General Catalog). A half inch layer of finely rubbed sphagnum moss or Terra-Lite may also be used. When using Terra-Lite, it is not necessary to cover the seed, but with soil or moss, cover with finely screened material just enough to cover. Keep cool and moist, not wet, be especially careful with water the sixth and seventh day as usually germination takes place about then. Another good method is to use the Bird Sub-Irrigator as illustrated on Page 60 in our General Catalog.

Most growers transplant seedlings into flats, bands or pots. Benching direct where they are to bloom will give better branched and more rapid growing plants.

A late Spring or a quick crop at anytime (3-5 months from seed) may be grown at 4 x 6" spacing, transplanted as above and not pinched.

## Sweet Peas

We will treat seed with rot inhibiting materials if specified on order.

### EARLY OR WINTER FLOWERING

A deep rooting crop that does best in deeply dug ground beds although, with good care, they can be produced on raised benches. Many of our customers sow in early July for late fall and early winter crop. September sowing will flower February and March. We recommend using the Spring Flowering type for November and December sowing. Varieties marked \* have been most popular with our customers.

## Stocks

(19,000 seeds per oz.)

This important cut flower assumes even greater importance as labor and other costs rise. They are best grown in a temperature of 50°-60°. Sowing direct into the bench where they are to bloom makes for stronger, more vigorous plants. Rows are usually made 6 inches apart and the plants are thinned to stand approximately 3 inches. Selection of the stronger seedlings will have a tendency to increase the percentage of doubles. Proper feeding with greenhouse Vigoro or Hy-Gro (every two weeks until buds form) will be found beneficial and greatly improve the quality.

## Larkspur

A favorite method is to sow outdoors during late August and early September directly where it is to bloom. Sturdy plants will develop that will carry over winter and flower the following Spring. Lights will mature the crop 2-4 weeks earlier.

# A SOMERSET INTRODUCTION

## BALLAS' NEW IVY

### *Curlilocks*

Exhibition Gold Medal—New York Florist Club

Silver Medal—New Jersey Florist Club

Unique and different

Leaves are curled, waved or crimped

Unusual, rich effect

Attractive in all sizes

Distinct from any other Ivy, CURLILOCKS has a growth similar to the Pittsburg Ivy but with curled, wavy or crimped leaves. This curling is increased when grown in full sun.

Primarily for use in plant combinations and interior decoration, hardiness has not been thoroughly tested, but we have reports that it survived several winters in the vicinity of New York City.

#### ROOTED CUTTINGS:

\$10.00 per 100

\$90.00 per 1000

(Minimum order 100 Rooted Cuttings)

## NEW *Double Snapdragon*

Pure White

R.C. \$10.00 per 100

(Minimum order 250 R. C.)

Bloom in December from August cuttings. Flower in May from cuttings potted in February.

Most Snap varieties grown from cuttings have had a tendency toward rust. These two varieties seem free of this difficulty. The growth is clean and free, and the stems are sturdy and strong. The flower spikes are exceptionally long and the individual florets are fully double and of large size. Their long lasting qualities will make them useful in many ways, especially corsages and other dainty made-up work.
